AGRICULTURAL PRICES - 1970 ANNUAL SUMMARY

This is the 12th annual bulletin summarizing the latest available monthly, season, and annual price estimates shown currently in Agricultural Prices and in the various annual publications showing Production, Use, and Value.

Prices Received by Farmers

The series designated Prices Received by Farmers relates to the average prices farmers receive for their products - generally at the point of first sale. Points of first sale by farmers may range from sales on a graded, packed, and delivered basis to bulk sales at the farm. The average price concept is that of a price which would result from dividing the total dollars received by all farmers for that commodity by the total quantity of the commodity sold. These estimates, except as noted below, do not measure the price of specified grades, kinds, or varieties at a common point of sale.

Milk sold to plants, apples, and citrus fruit are exceptions to the "as sold" basis. Milk is priced f.o.b. plant or receiving station except in California where it is priced f.o.b. ranch. The apple price series relates to the equivalent packinghouse-door returns for Washington and Oregon, to equivalent returns for bulk fruit at first delivery point for California, and to the price at point of first sale for other States. Citrus prices relate to equivalent returns at a specific point of sale. The citrus series is omitted from this publication, inasmuch as revised monthly equivalent returns for the 1969-1970 crop will be published as a supplement to the September 1971 issue of Agricultural Prices.

Monthly and season or annual average U. S. prices do not include Alaska and Hawaii prior to 1962. Beginning with 1962, prices for Alaska and/or Hawaii are included for hogs, beef cattle, calves, sheep, chickens excluding broilers, broilers, eggs, wool, all milk sold to plants, and fluid market milk. Tables presenting prices for these commodities indicate the basis on which data are reported; i.e., monthly and annual average or annual average only.

Monthly Prices. Prices for most commodities are collected during a 5-day period centered on the 15th of the month. These prices are used to represent average prices received for sales of the commodity during the month. For some commodities, monthly prices as published currently are reviewed at the end of the season and revised, if necessary, to take into account sales for the entire month. Notable among this group are meat animals and milkfat in cream. For the following commodities the current estimate is defined as a monthly average: apples, peaches, pears, strawberries, citrus, potatoes, tobacco, milk sold to plants, broilers, and wool. At the State level, prices are generally estimated only for months in which there are 0.5 percent or more of annual sales of the commodity.

Weights for computing monthly regional and United States average prices are as follows:

- (a) Annual production or sales for hay, all meat animals except beef cattle, milkfat in cream, and wool. At the end of the calendar year regional and United States wool prices are recomputed, using estimated sales during the month;
- (b) January 1 inventory numbers for milk cows;
- (c) Estimated marketings during the month for all other commodities.

State season average prices are computed by weighting mid-month prices by the estimated percentage of sales made each month in the marketing season. Also included in the season average price are allowances for unredeemed loans and purchases by the Government, if any, valued at the average loan and purchase rate, by States. United States season average prices are computed by weighting State season average prices by the estimated quantities sold in each State. Marketing seasons for each commodity are shown on pages 172 and 173.

State annual average prices are computed by weighting monthly prices by the estimated proportion of the calendar year sales made each month. Regional and United States average prices are obtained by weighting State prices by estimated quantities sold in each State.

Prices Paid by Farmers

The State, regional, and U. S. averages of prices paid by farmers for goods and services presented in this summary are based primarily on the voluntary reports of thousands of merchants and dealers throughout the Nation. These estimates of average prices, together with computed indexes and price ratios as published here, relate to transactions as of the 15th of the month designated. The price data underlying the estimates are collected from dealers and merchants at regularly recurring intervals by means of mailed inquiries and personal enumeration.

Average prices paid by farmers are collected for the most important commodities purchased by them. Most data are collected by mail questionnaires, and for that reason commodities are described or specified as simply as practicable. Reporters are asked to quote the price of the most commonly sold item that best fits the questionnaire definition or specification. Specifications vary considerably in amount of detail included. Some must of necessity be very specific because the presence or absence of a certain feature may have a sizable effect on the price. For example in the case of tractors, diesel power as compared with gasoline power, the horsepower classification, and whether wheel or crawler-type all materially affect the price. Other commodities can be described in broad or general terms because various features are easily substitutable and their presence has a relatively minor effect on price. An example is "Men's overalls" for which no specification for either style or type of material is included.

The trend in the marketplace for items purchased by farmers has required increasing detail in specifications. Thus, for dairy feed, the specification of "bulk" or "sacked" was added in response to the changes in pricing practices. Bulk feed prices usually carry a lower price per ton than feed purchased in sacks. In all cases, dealers are asked to report the price of the size, grade, or quality of the item, most commonly sold to farmers, as described in the question.

For some supermarket items, where the contents of packages often vary considerably, respondents are asked to report both price and size of package most commonly sold. Prices reported for varying container or package size are then converted to an equivalent per-pound basis.

The average prices published in the following tables are a combined weighted average of chain and independent store prices for food and tobacco, household supplies, clothing and dry goods household furnishings, building and fencing materials, motor supplies, and farm supplies. Prices paid for farm machinery, field seed, livestock and poultry feed, fertilizer, baby chicks, and turkey poults are based largely on quotations from independent operators. Regional and U. S. prices where shown are weighted averages.

Copies of this annual price summary are available upon request to the United States Department of Agriculture, Statistical Reporting Service, Washington, D. C. 20250. Prices paid for feed, seed, fertilizer, and certain other items also are published currently, by States, in monthly issues of AGRICULTURAL PRICES, a report of the Statistical Reporting Service of the United States Department of Agriculture, Washington, D. C.

The standard reference base for the major statistical series of the Federal Government is updated approximately every 10 years. Budget Bureau Circular A-46, dated March 31, 1970, changed this based from 1957-59 to the single year 1967, effective January 1971.

The converted data shown below supplement but do not replace the official series which, pursuant to law, are published on the 1910-14=100 base.

1/ State season average prices are computed by weighting State monthly prices by estimated sales for the month. U. S. season average price is computed by weighting State season averages by estimated sales for the crop year. The monthly prices refer to all potatoes being sold in a given month regardless of the year harvested. Thus, the U. S. all-potato price for April 1969 includes sales from the 1968 fall crop and the 1969 winter and 1969 spring crops.

1/ The monthly price refers to all potatoes being sold in a given month regardless of the year harvested.
2/ Refers to crop of designated year. Preliminary season average price estimates for the 1970 crop based on sales through November with an allowance for marketings for the remainder of the season. A report covering farm disposition, season average price and value for the 1970 crop will be issued August 6, 1971.

1/ Milk prices and milkfat tests shown for 1970 on pages 50 through 55 are revised where necessary for geographic divisions, the U. S., and for the following States: N. J., Ohio, Nebr., Del., Md., Va., W. Va., N. C., S. C., Ga., Fla., Tenn., Miss., La., Okla., Texas, Idaho, Wyo., N. Mex., Ariz., Utah, Nev., Oreg., Calif., Alaska, and Hawaii. Revised 1970 milk prices and milkfat tests for the remaining States will be published in Supplement No. 1 to the August 1971 issue of AGRICULTURAL PRICES.

2/ Includes data for some States not shown separately.

Note: Milk prices shown on pages 50, 52, and 54 relate to average prices for the month, including premium payments and before hauling charges are deducted.

MILK COWS: Monthly and annual average price per head received by farmers,
by States, 1970; United States, 1965-70 1/
